## Endovascular treatments of PAD : tips and tricks on new devices and techniques

Monday 24 and Tuesday 25 June 2019

Clinique des Grangettes  
7, chemin des Grangettes  
1224 Chêne-Bougeries

Fondation des Grangettes  
Genève

Dear colleagues,

We are pleased to invite you to the «Endovascular treatments Workshop» which will be held in the Clinique des Grangettes. In the last decade peripheral endovascular interventions have increased worldwide. Thanks to new devices and especially new revascularization techniques, complex and very complex lesions are more and more treated percutaneously. Endovascular approaches are nowadays considered as a first line treatment option in many centers, and surgery is reserved only in the case of endovascular failure.

The aim of this workshop is to:

- Get essential tips and tricks of complex peripheral interventions from medical and cath-lab personnel's point of view
- Discuss on endovascular material and techniques in order to safely and efficaciously start or improve an endovascular activity
- Discuss new techniques and dedicated devices used to treat complex TASC C-D lesions

Robert F. Bonvini M.D., interventional cardiologist and angiologist at Clinique des Grangettes, will first abord theoretical aspects and organise a cath-lab visit with a peripheral material review and with a first endovascular case. On the second day, you will assist to 5 peripheral interventions done by Robert F Bonvini M.D.

This conference is opened to interventional radiologists, cardiologists, angiologists and vascular surgeons. We look forward to welcoming you at Clinique des Grangettes.

*Robert F. Bonvini M.D.*

Program

## Endovascular treatments of PAD : tips and tricks on new devices and techniques

### Monday, June 24<sup>th</sup>

8 h45 Welcome

9 h00 Endovascular cases

12 h 30 Lunch

14 h 30 **Presentations : Robert F Bonvini M.D.**

- Endovascular treatments of intermittent claudication
- Endovascular treatments of critical limb ischemia
- Endovascular treatments of acute limb ischemia

16 h 00 Closure of day 1

### Tuesday, June 25<sup>th</sup>

8 h 00 Endovascular cases

13 h 00 Lunch

15 h 00 Closure of the workshop
