February, Wednesday 20th

Clinique des Grangettes
7, chemin des Grangettes
1224 Chêne-Bougeries

Fondation des Grangettes
Genève

Dear colleagues,

Program

We are pleased to invite you to the «Endovenous Thermal Ablation of varicose veins Workshop» which will be held in the Clinique des Grangettes. In the last decade peripheral endovenous interventions have increased worldwide. Thanks to new devices and especially new techniques, varicose veins are more and more treated percutaneously. EVTA is nowadays considered as a first line treatment option in many centers, and surgery is reserved only for very selected cases.

The aim of this workshop is to :

- Get essential tips and tricks of EVTA from medical and logistic point of view.
- Discuss on EVTA material and techniques in order to safely and efficaciously start or improve an EVTA program in an ambulatory setting.

Robert F. Bonvini M.D., interventional cardiologist and angiologist at Clinique des Grangettes, will first abord theoretical aspects and organise a visit of the dedicated EVTA rooms. You will assist four to five EVTA interventions done by Robert F Bonvini M.D.

This conference is opened to interventional radiologists, angiologists, general and vascular surgeons. We look forward to welcoming you at Clinique des Grangettes.

Robert F. Bonvini M.D.
