

ENDOVASCULAR TREATMENTS OF CVI

**ENDOVENOUS THERMAL ABLATION OF VARICOSE VEINS: TO SIMPLIFY
TECHNIQUES AND LOGISTICS FOR AMBULATORY CARE**

Monday, November 9th, 2020, at Hirslanden Clinique des Grangettes,
7 Chemin des Grangettes, 1224 Chêne-Bougeries

8h00 Welcome and breakfast

Main conference room

9h15 First scheduled case

Operating theater

11h15 Second scheduled case

Ambulatory technical platform

12h45 Lunch and theory

14h00 Third scheduled case

Ambulatory technical platform

Patient transfer to room and discharge formalities

15h30 Fourth scheduled case

17h00 Closure of the workshop

This workshop is accredited by the Société Suisse d'Angiologie up to 8 credits.

This program is supported by:

Dear Colleagues,

We are pleased to invite you to the «Endovenous Thermal Ablation of varicose veins Workshop», which will be held at Hirslanden Clinique des Grangettes.

In the last decade, peripheral endovenous interventions have increased worldwide. Thanks to new devices and especially to new endovascular techniques, varicose veins are more and more treated percutaneously. EVTA is nowadays considered as a first line treatment option in many centers, when surgery is only reserved for specifically selected cases.

The aim of this workshop is to:

- Get the essential tips and tricks of EVTA from medical and logistic points of view
- Discuss about EVTA material and techniques, in order to safely and efficiently start or improve an EVTA program in an ambulatory setting

Robert F. Bonvini M.D., interventional cardiologist and angiologist at Hirslanden Clinique des Grangettes will first develop different theoretical dimensions. A visit of the dedicated EVTA rooms will then be conducted along with four EVTA interventions.

This conference welcomes interventional radiologists, angiologists and general as well as vascular surgeons. We look forward to welcoming you at Hirslanden Clinique des Grangettes.

Robert F. Bonvini M.D.
